

SEARCH TIPS FOR PRODUCT FINDER

LEDiL's "Product finder" search utility allows for wildcard searches not possible in the "PRODUCT SEARCH" or "FILTERED SEARCH" functions. Following are some useful tips:

- Searches using "Product finder" do not allow you to narrow the results, but similar to other site searches you can download the results using the "Download this search as CSV-file" button at the bottom of the search results.
- Search the five-digit numerical "drawing code" that precedes the underscore "_" in the order code to see all LEDs qualified for use with a given order code.
- Enter "family name" such as STRADA or TINA to see all order codes containing the searched family name.
- Enter LED type such as "XP-G" or LED manufacturer such as "Nichia" to see all qualified optics by LED type or by LED manufacturer.
- Search "wash" for asymmetric wall-wash optics
- Search "Molex" or "Tyco" for optics designed for use with solderless connectors.
